

## July Water Main Break & Parking Lot Repair Update

Thank you for your patience and understanding during the water main break that occurred in July. We appreciate everyone's cooperation.

As you may have noticed, the parking lot where the break occurred has **not yet been repaved**. The contractor has advised that the ground (substrate) needs adequate time to fully settle before new asphalt can be installed.

Paving too soon could result in cracking and the need for additional repairs, which we want to avoid.

The contractor has recommended waiting **6–8 weeks from the date of the repair**, giving us a **tentative asphalt repair timeframe of early September**.

**Please continue to use caution around the affected area.**

Do not walk, drive, or park on the open section of the lot until repairs are complete. Barriers or signage may be in place to mark off the area—please respect these for your safety and to ensure the integrity of the future repair.

We understand this is an inconvenience and appreciate your continued patience. This delay is necessary to ensure a high-quality, long-lasting result for the community.
